OASA
OPEN AUTONOMOUS SYSTEMS ALLIANCE

WELCOME TO THE ERA OF ENDLESS FRONTIERS.

Now build it.

OASA builds open autonomous systems that make American communities, and the nation as a whole, better, cleaner and safer, and that carry humanity farther than it has ever gone.

Three pillars

01
Resilience

Protect lives. Strengthen American infrastructure. Take on environmental challenges. Be ready for the unexpected.

02
Ingenuity

Advance American engineering and domestic manufacturing. Build on open standards. Teach the skills. Invent together.

03
Exploration

Push autonomous systems across land, air, sea and space, to places no one has reached before.

Two missions

MISSION ONE · EARTH

Protect and advance life on Earth

Help communities survive disasters, guard critical infrastructure, explore our oceans and solve the problems that threaten our future.

MISSION TWO · THE STARS

Build our future among the stars

Create the robots, networks and exploration systems that take humanity beyond Earth, one bolder mission at a time.

How we build

- **People first.** Safety comes before speed, autonomy and everything else. When a machine isn't sure, it stops and asks.
- **Secure, always.** Every link is encrypted. No single server, company or person can take the system down. We try to break our own work before anyone else does.
- **Open by default.** Designs, code and docs are published. We build on great open work before reinventing it, and anyone can reproduce what we make.
- **Built to last.** Repairable, documented, affordable, made in America, and ready to build at scale by any chapter.
- **One picture.** Every system shows up on the same shared map, and anyone can fly or drive what runs on its own.

How we work together

- **Builders first.** Doing beats talking.
- **Dream big, ship small.** Huge visions, built one step at a time.
- **Lift others.** Teach, mentor, share credit.
- **Open and honest.** Share failures as freely as wins.
- **Mission over ego.** The work matters more than who gets the credit.

You don't need permission to help build the future. You just need somewhere to begin.
